7-14 days
60-90 days to fully establish

PLANTING CONDITIONS

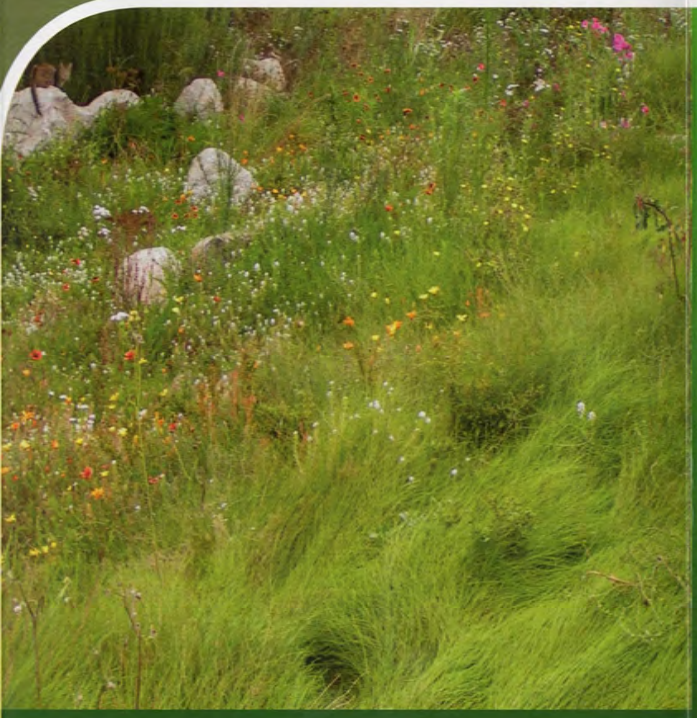

pH Level: 5 to 8.5

MAINTENANCE

2-4 pounds of nitrogen per 1000 sq. ft.

Specifications

- Chewing Fescue
- Hard Fescue
- Sheep Fescue

SLOPE CONTROL

is a year round fine fescue seed blend. The fine fescue varieties of this mix are extremely hardy in the arid climates of Southern California due to their deep penetrating root systems.

SLOPE CONTROL

is also excellent in cooler climate regions as well as partial shade areas. It adapts itself well to marginal soils, and becomes a beautiful emerald green that grows to an established height of 14 to 16 inches. The blades will lay over slightly to produce a flowing green wave that never has to be mowed. As for holding an incline slight to severe,

SLOPE CONTROL'S

aggressive roots do the job of maximum erosion protection where others can't.

FOR A EXTRA SPLASH OF COLOR
ADD 2% OF ANY WILDFLOWER MIX
OR CALIFORNIA POPPIES.
