

# SLOPE CONTROL

Hillside Erosion & Ground Cover

# Slope Control

## Hillside Erosion & Ground Cover Mixture

SLOPE CONTROL is a year round fine fescue seed blend. SLOPE CONTROL is one half Chewing Fescue, one quarter Hard Fescue and one quarter Sheeps Fescue. These varieties of fine fescue are extremely hardy in the arid climates of Southern California due to their deep penetrating root systems. SLOPE CONTROL is also excellent in cooler climate regions as well as partial shade areas. SLOPE CONTROL adapts itself well to marginal soils, and becomes a beautiful emerald green that grows to an established height of 14 to 16 inches. The blades will lay over slightly to produce a flowing green wave that never has to be mowed. As for holding an incline slight to severe, SLOPE CONTROL'S aggressive roots do the job of maximum erosion protection where others can't.

### FEATURES

- Year Round Green Color
- Fine Texture
- Higher Density
- Very Durable

### BENEFITS

- Excellent Seedling Vigor
- Fast Establishment
- Holds Steeper Slopes
- No Mowing
- Less Fertilizer Needed
- Improved Disease Resistance

### SEEDING RATE

- Turf: 8-10 pounds per 1000 sq. ft.

### ESTABLISHMENT

- Germination: Typically 7-14 Days
- NO MOWING NEEDED

### APPLICATION

Use for Hillside Erosion or Ground Cover.

- Parks
- Cemeteries
- Schools
- Golf Course Hillside

### MIXTURE

- CHANCELLOR CHEWINGS (Festuca ovina)
- GRANITE HARD FESCUE (Festuca Longifolia)
- DALL SHEEPS FESCUE (Festuca rubra)

*Note: Varieties are subject to change without notice to equal varieties.*
